

ANJALI GOYAL

Software Engineer (SDE 3) - Distributed Systems

Backend engineer with 5+ years of experience building large-scale distributed systems, cloud platforms, and AI-powered solutions at Microsoft and Adobe. Proven track record designing highly available and reliable backend services, Kubernetes-based platforms and developer productivity solutions serving millions of users.

Experience

Adobe **12/2024 – Present**

Software Engineer 3 *Bangalore, India*

- Own backend development for the Kafka-driven listing and synchronization service powering Recents, Favorites and Shared With You experiences across Creative Cloud apps (Firefly, Express, Acrobat) serving 10M+ DAU: 99.99% availability.
- Developed an AI-assisted diagnostics workflow combining logs and runbooks to summarize failures, suggest fixes and surface high-frequency issues, reducing on-call tickets and improving incident response time by 50%.
- Owned end-to-end migration from legacy REST to GraphQL for Personalized Listing Service - Kafka/SQS event driven workflows; partnered with frontend & infra teams, and improved client performance by 20% while reducing over fetching.
- Built real-time ingestion pipelines that processed metadata changes from multiple Creative Cloud products, normalizing and enriching asset information before publishing updates to downstream systems.

Microsoft **06/2021 – 12/2024**

Software Engineer 2 *Hyderabad, India*

- Architected and implemented a reusable Any source to Any target assessment framework, adopted by 4 partner teams, standardizing metadata collection and validation and cutting development timelines by 50%.
- Enabled enterprise-scale migration planning for stateful workloads, measured by full Windows and Linux fleet support, by designing an Oracle Discovery & Assessment service on AKS- operating containerized infrastructure across mixed-OS hosts.
- Powered 10k+ monthly database migrations across SQL, PostgreSQL, and Oracle, measured by adoption in Azure Portal and Azure Data Studio, by building the end-to-end UX for Azure Database Migration Service.
- Automated Self Hosted Integration Runtime provisioning and diagnostics; authored runbooks and telemetry, partnered with support and QA to reduce onboarding drop-off and accelerate incident resolution.
- Designed and implemented a centralized validation and error-handling layer leveraging MySQL and Redis to support scalable discovery and assessment workloads, and to improve reliability .

JP Morgan Chase & Co. **01/2021 – 06/2021**

Software Engineering Intern *Mumbai, India*

- Improved deployment reliability and reduced manual validation effort, measured by end-to-end CI pipeline test coverage, by building an automated testing framework integrated into CI workflows.

Technical Skills

Languages: Go, Java, Python, C++, C#

Backend & Cloud: Docker, Kubernetes, AWS EKS, Grafana, Prometheus, MySQL, Redis, Kafka, Springboot

AI/LLM: LLMs, LangChain, AI Agents, Prompt Engineering, RAG, AI-assisted Diagnostics, MCP

Projects

Auto Code Reviewer (LLM Hackathon #1/600+): Built and open-sourced reusable AI code review agent integrated with Microsoft Teams and GitHub PR workflows, enabling automated feedback, issue detection, and conversational code review.

Portfolio Management Platform (LLM): Developed an agentic AI workflow using LangChain, Streamlit to enable financial advisors to query, analyze, and act on portfolio data through natural language without requiring ML expertise.

Education

Birla Institute of Technology and Science, Pilani (BITS Pilani) **07/2017 – 06/2021**

Bachelor of Engineering (Honours)

Achievements

Ranked #1 globally in an LLM Hackathon (600+ projects), Azure & AWS Cloud Computing Certifications, Award of Excellence by the Government of India, Wolf of wall street panelist, Grace Hopper Conference Attendee (2023, 2024, 2025)
